

ecoFGSS®

Babcock's LGE business is a world-leading provider of cargo handling and fuel gas supply systems for the liquefied gas markets. Our environmentally-focused technologies improve efficiency and enhance performance, delivering value to customers throughout the vessel's lifetime.

- Babcock LGE's liquefied petroleum gas (LPG) Fuel Gas Supply System - has been developed to meet the growing demand for LPG as a marine fuel for a range of vessels. The system is designed with safety and operability at its heart, minimising crew interactions whilst providing a continuous and reliable fuel supply for the vessel.

Integration of 'cargo' and 'fuel' systems

between 'cargo' and 'fuel'. This holistic approach ensures optimum efficiency.

Overview of ecoFGSS®

ecoFGSS™ can utilise fuel from either a cargo tank or deck tank.

Crucially, for ease of vessel operability, crew interaction is minimised by automating functionality as much as possible, without compromising safety. ecoFGSS has been developed in conjunction with MAN-ES for their ME-GI and ME-LGI engines, which ensures that fuel is available to the engines 24 hours a day, seven days a week.
